

24th August 2010

To whomever it may concern

Dear Sirs

ARCHER STRUCTURES LTD

We write to confirm that the above referenced sub-contractor has successfully completed the installation of circa 200tns of structural steelwork in to 5 floors of an existing 1950's concrete framed building in the Birmingham City Centre.

These works were undertaken safely and to programme in extremely restrictive conditions with cranaage limited to out of hours from the pedestrian precinct, poor existing slab loadings of below 4kn/m2 and slab to slab heights of 5m plus.

We would record that the design was amended and liability accepted by Archer Structures to avoid the need to back prop during installation, allowing the general works to proceed during the steelwork installation thus significantly reducing the overall construction period.

Should you require any detailed information please do not hesitate to contact the undersigned.

Yours Sincerely

A handwritten signature in black ink, appearing to read "James Bowden", written over a printed name.
