Dear Peter

**Re Nottingham Trent University: Equestrian Project Brackenhurst Campus,  
Southwell, Nottinghamshire**

I would like to express my appreciation of your proactive approach to the progression of the above project. Archer Structures are to be commended in that it was Archer's initial dimensional survey, done in good faith, which identified some dimensional inaccuracies in the design that needed urgent attention. I recall a crisis meeting to agree a redesign and new alternative steelwork sizes that would have left some fabricators struggling to obtain the steelwork and to meet timescales; not the case I am pleased to say with your company. Further to this additional work not specifically detailed on the drawings were completed in a timely manner; despite the concerns as to who was going to pick up the final costs.

The extension of project to include a photovoltaic installation meant a major rescheduling of the work. This rescheduling ultimately meant that the roof sheeting would need to go ahead sooner, and it was Archers willingness to install the beam from inside the building that made this possible, quite a feat with a 40 tonne beam!

The beam was the talking point about the University at the time of installation and is a substantial piece of work. My first impressions at seeing the beam in place was that it had an intrinsic beauty, not what most people would necessary notice and admire; but is a wonderful piece of work of which I am sure you and your company will be proud of, and you should be.
